

EOS MASTER EXECUTIVE ATLAS

Board version · Report EOS-MSR-2026-09-01-001 · Audit AUD-EOS-MASTER-20260901-021328Z · Generated 2026-09-01T02:18:00Z

Repository: <https://github.com/valentinflorezarbelaez-ai/Eos->

VM path: /workspace · **HEAD at start:** 24b69689c447f94afebd4893f5f0f83f45e0a823

Verdict: D — NOT_READY · Production ready: NO · Local-complete on this HEAD: UNKNOWN

This atlas is the 20–30 page board cut of the master report. It does not add metrics. Every figure is in EOS_MASTER_SYSTEM_DATA.json / EOS_MASTER_SYSTEM_METRICS.csv.

A. What this is

EOS is a GitHub-hosted Node.js “Engineering Operating System”: governance documents, a local Mission OS kernel (`src/core`), a larger legacy/lab factory (`scripts/engine`), tests, and mission-control JSON. It is **not** a running production SaaS in this environment.

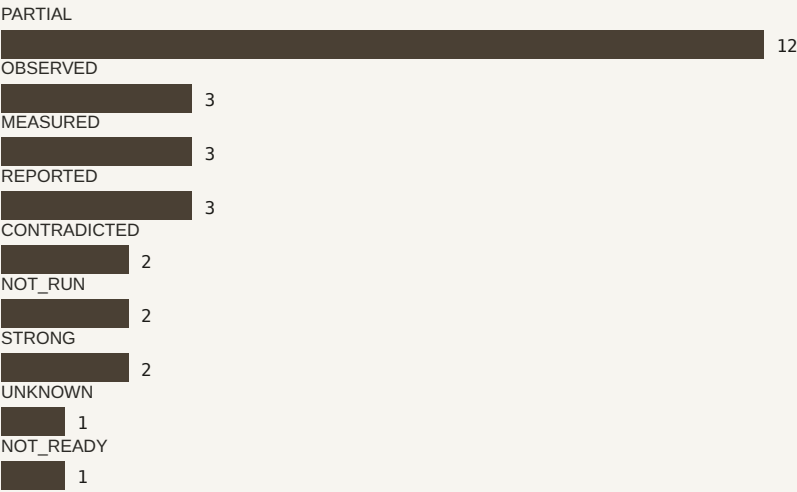

This audit was **read-only** except for writing these report files.

B. Dashboard (no %)

Surface	State
File/JSON verifier	VERIFIED (471/471)
Mission OS source	STRONG (exists)
Tests executed	NOT_READY (NOT_RUN)
Health telemetry	CONTRADICTED
Production	NOT_READY
Fundación product	NOT_READY (empty)
Third-party MCP live	UNKNOWN

npm supply chain	STRONG (zero deps)
------------------	--------------------

Executive dashboard — Graph 29 state histogram

Counts of epistemic/state labels across 29 dimensions · NO fake completeness percentage

C. The only verdict

D — NOT_READY.

Not C: freeze suite and MissionRuntime were not reproduced on this HEAD.

Not E: kernel source exists; verifier passed; git intact.

Ultimate board question: treat EOS as an operational production autonomous system today? **NO.**

D. Numbers a director may quote (and no others)

Quote	Do not say
verify:strict 471/471 PASS , 32 ms, 2026-09-01T02:15:34Z	“472 tests” / “full suite green”
777 static <code>test()</code> / <code>it()</code> calls in 132 files	“777 tests passed”
1046 product files, 651 docs	“62% complete”
22 src files, 6323 lines; scripts 15978 lines	“scripts are the product” without dual-plane caveat
75 commits, 1 RC tag, HEAD 24b6968	“main is still 78b28d6”
0 npm dependencies	“no code dependencies anywhere” (Lab imports hono/astro)
0 hits for 726/726 and 615/615	those historical memory numbers

 Test health contradictions

E. Architecture in one picture

Two planes:

- 1. **Mission OS** — bin/eos.js → MissionRuntime → ATS / FSM / HITL / Integration gate / MCP bridge.
- 2. **Legacy factory** — scripts/cli/eos.js + 100+ engines, including **three duplicate kernel filenames**.

Documented modules synthesisEngine.js / executionOrchestrator.js / scripts/engine/core **are not in the tree**.

Product inventory by class (file count)

MEASURED 2026-09-01T02:18:00Z · source raw/product_baseline_inventory.json · excludes .git node_modules .missions docs/report:

F. Control and authority

HITL human-only actions are explicit in source (direction/release gates, production release, credentials, constitution exceptions). That is **OBSERVED text**, not a runtime proof.

`.cursor/mcp.json` sets `EOS_MODE=read-write LEVEL_1` — looser than the server's default `read-only`.

MissionRuntime **mkdir .missions in the constructor** — even help is not a pure read. Help was therefore `NOT_RUN`.

G. Security and bypass (board-level)

- Step-9 security matrix remediates **files that do not exist** → do not cite 16/16 attacks as current.
 - MCP “CONNECTED” in mission-control is **not observed** here.
 - Heuristic secret-like assignments in 10 test/engine files — review, do not panic, do not ignore.
 - Bypass register is a surface list, not a red-team report.
-

H. Projects and money

Six registry projects; Fundación empty; GAP-002 still UNKNOWN (do not infer NIT/banking).

BUDGET . j son \$0.32 / 45200 tokens: **REPORTED**, not measured. Do not use in finance discussions.

I. Risks (P0 first)

- **R-P0-01 P0:** Stale/contradictory system-health pass counts used as live telemetry
- **R-P0-02 P0:** Security remediations cite modules that do not exist
- **R-P0-03 P0:** npm test not executed; mutation risk in suite
- **R-P1-01 P1:** Dual kernel copies (src/core vs scripts/engine)
- **R-P1-02 P1:** MCP CONNECTED claims vs this environment
- **R-P1-03 P1:** Freeze documents pin stale main SHA
- **R-P1-04 P1:** PRJ-FUNDACION empty; GAP-002 still UNKNOWN
- **R-P1-05 P1:** CLI constructor creates .missions as side effect

Risk register counts by severity (this audit)

J. Do not build / do not say

- Production deploy / public hosting — PRODUCTION_READY=NO; no network/prod capability verified
 - Unattended LEVEL_3+ autonomy on real client targets — HITL/ATS not exercised this audit; Fundacion barrier exists
 - Infer GAP-002 legal/banking data — Explicit constitutional unknown
 - Treat verify:strict 471 as test coverage or runtime health — Path/JSON existence only
 - npm install / add dependencies without L1/L2 policy — DEPENDENCY_POLICY_L0
 - Merge or claim freeze paperwork still equals HEAD — 78b28d6 ≠ 24b6968
 - Operate claimed CONNECTED third-party MCPs from this Linux VM as if live — Not observed; Windows engram path
 - Cite 726/726 or 615/615 as current facts — Strings absent in tree; previous-memory only
-

K. Graph 29 (ordinal visual only)

Do not average the 0–5 ordinals. They exist so a board packet can *see* imbalance (testing/security/docs drift vs git/deps).

L. Fifteen questions (answers only)

1. Is EOS production ready? — **NO**
 2. Is EOS complete for local governed use? — **PARTIAL**
 3. Does a real Mission OS kernel exist in src/? — **YES**
 4. Did this audit run the product test suite? — **NO**
 5. Did any automated gate pass here? — **YES**
 6. Are published test-health numbers trustworthy? — **NO**
 7. Is CORE frozen as a single inode? — **UNKNOWN**
 8. Is PRJ-FUNDACION operational? — **NO**
 9. Is GAP-002 resolved? — **NO**
 10. Are third-party MCPs connected here? — **UNKNOWN**
 11. Is there an npm lockfile / installed deps? — **NO**
 12. Can we claim 726/726 or 615/615 tests? — **NO**
 13. Is security Step-9 matrix applicable to current src/core? — **NO**
 14. Should the board authorize production or client writes? — **NO**
 15. What is the single best next measurement? — **Isolated freeze-suite replay**
-

M. What to do next (recommendations, not work done)

1. Stop publishing 663/608/472/20 as **current** without a new MEASURED run (REC01).
 2. Quarantine Step-9 matrix as historical (REC03).
 3. Update or supersede freeze docs for HEAD 24b69689 (REC04).
 4. Replay the 4-file freeze suite in a **tmp** workdir and seal the log (REC07).
 5. Declare *src/core* the only kernel; mark *scripts/engine* duplicates deprecated (REC08).
 6. Keep PRODUCTION_READY=NO (REC18).
 7. Keep GAP-002 UNKNOWN (REC12).
-

N. Findings polarity

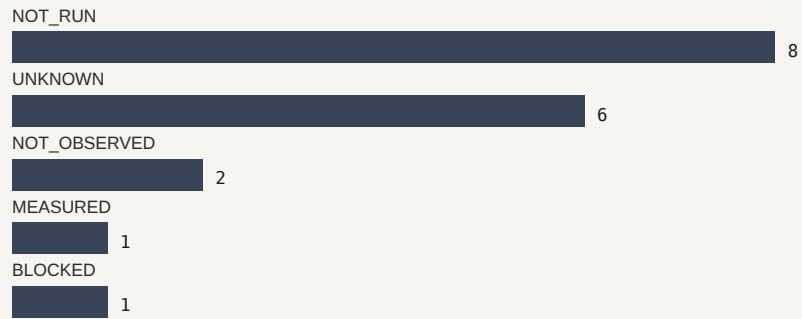

Positive: verifier works; kernel source exists; zero npm deps; PRODUCTION_READY=NO is honest at system level.

Negative: contradictory health, missing security targets, stale freeze SHA, dual kernel, empty Fundación, MCP over-claim.

O. Capability operational field

Capability matrix — operational field (not status of code)

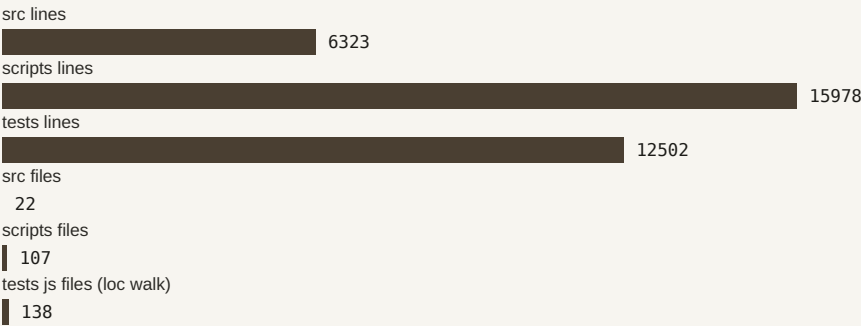

Rule: code existence $\neq$ operational capability · EOS_MASTER_CAPABILITY_MATRIX.json · most items NOT_RUN / UNKNOWN

Most capabilities are **NOT_RUN** or **UNKNOWN**. Only the file/JSON gate is MEASURED.

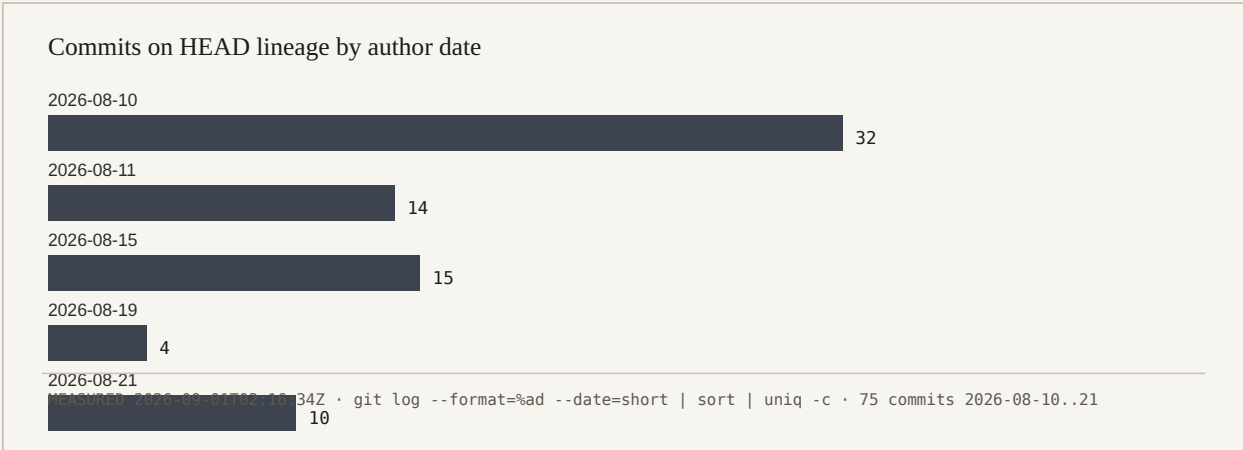

P. Lines of code (not quality)

Lines of code by layer (heuristic)

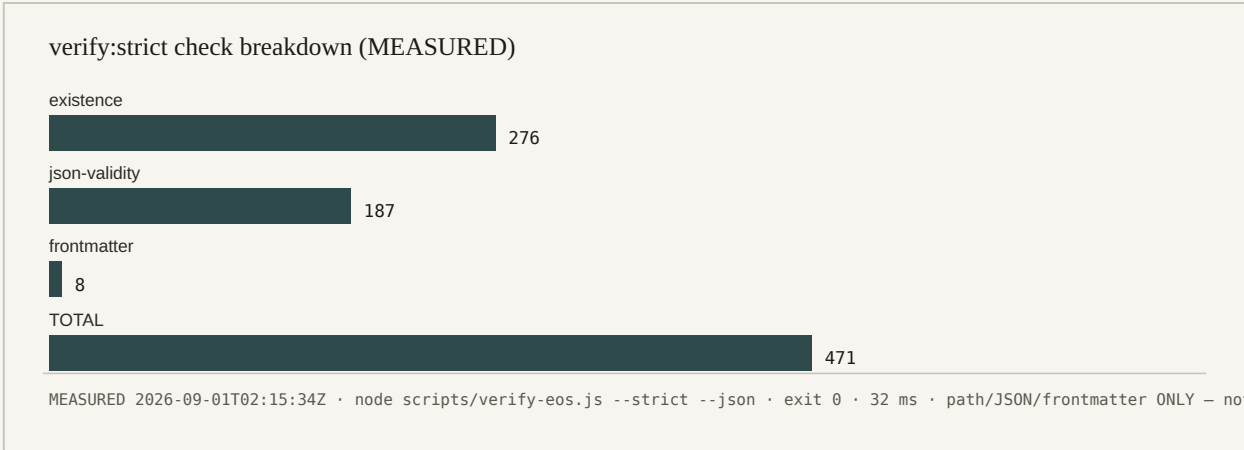

MEASURED 2026-09-01T02:16:34.556Z · raw/loc_inventory.json · fn_like is regex not cyclomatic · scripts 3.4× src lines

Q. Git burst

75 commits in 11 days (10–21 Aug 2026). Fast document+code accretion. Drift risk is structural.

R. verify:strict composition

276 existence + 187 JSON + 8 frontmatter = 471. This is a **workspace integrity linter**, not a product test.

S. How to read this packet in 10 minutes

1. Verdict D (§C).
 2. Numbers table (§D) — refuse any other headline figure.
 3. Contradictions (master report §46).
 4. P0/P1 risks (§I).
 5. Ultimate NO (§C / master §51).
-

T. Authority of this atlas

Prepared by a Cloud Agent under read-only constraints. It **cannot** certify production. It **can** certify that, on this VM, at these timestamps, the listed commands produced the listed outputs.

Full narrative: EOS_MASTER_SYSTEM_REPORT.md (53 sections).

End of Executive Atlas.

U. Full metadata (board record)

Field	Value	Class
Report ID	E0S-MSR-2026-09-01-001	—
Audit ID	AUD-E0S-MASTER-20260901-021328Z	—
Abs path	/workspace	MEASURED
HEAD	24b69689c447f94afebd4893f5f0f83f45e0a823	MEASURED
Node / npm / git	v22.14.0 / 10.9.7 / 2.43.0	MEASURED
Package manager	npm scripts; no lockfile; 0 deps	OBSERVED

Commits / tracked files / tags	75 / 1048 / 1	MEASURED
--------------------------------	---------------	----------

This page exists so a director can file the audit without opening the 53-section report.

V. Contradiction register (complete)

If a slide still shows 726, 615, 663, 608, 472, or 20 as **today's** health, it is wrong.

ID	A	B	Label
CX-01	CURRENT_STATE 663/663	suite NOT_RUN; static 777	CONTRADICTED
CX-02	cli fallback 608/608	same	CONTRADICTED
CX-03	historical verify 472/472	this run 471/471	CONTRADICTED
CX-04	freeze main 78b28d6	HEAD 24b6968	CONTRADICTED
CX-05	Step-9 remediations	target files absent	CONTRADICTED
CX-06	RISK.json scripts/engine/core	directory absent	CONTRADICTED
CX-07	MCP CONNECTED	not observed here	CONTRADICTED
CX-08	memory 726/726	0 hits in tree	CONTRADICTED
CX-09	memory 615/615	0 hits as live metric	CONTRADICTED
CX-10	freeze 20/20 as current	HEAD moved; NOT_RUN	CONTRADICTED as current
CX-11	CORE FROZEN slogan	src/core changed after freeze docs	CONTRADICTED if Δ=0

CX-12	EVD-0033/34 PRODUCTION_READY	system dictamen NO	CONTRADICTED if global
-------	------------------------------	--------------------	------------------------

System-level PRODUCTION_READY=NO is **consistent** and accepted.

W. Graph 29 table (all dimensions)

#	Dimension	State	Note
1	01 Architecture coherence	PARTIAL	Dual planes src/core vs scripts/engine; 3 duplicate kernel basenames
2	02 Documented vs actual	CONTRADICTED	Security matrix cites missing synthesisEngine/executionOrchestrator; freeze HEAD stale
3	03 Entrypoints	PARTIAL	bin/eos.js and scripts/cli/eos.js both exist; CLI --help not executed (mkdir side effect)
4	04 MissionRuntime	OBSERVED	Class and methods exist; no .missions; constructor not invoked this audit
5	05 FSM	OBSERVED	17 states, 16 transitions imported from src/core/sdd/sdd-fsm-engine.js
6	06 Authority / HITL	OBSERVED	ATS + HitlGatekeeper modules exist; runtime not exercised
7	07 Tools / MCP	PARTIAL	20 tools declared in src; MCP CONNECTED claims not observed on this VM
8	08 Governance matrix	PARTIAL	Policies and RISK.json exist; frozen-core path scripts/engine/core missing
9	09 Security matrix	CONTRADICTED	EOS_STEP_9_SECURITY_MATRIX.json remediates files that do not exist
10	10 Bypass resistance	UNKNOWN	Guards exist in source; bypass suite not executed this audit
11	11 Evidence system	PARTIAL	84 evidence JSON files exist; contents treated as REPORTED
12	12 Testing inventory	MEASURED	132 test-like files; 777 static test()/it() calls; count ≠ coverage
13	13 Testing execution	NOT_RUN	npm test / test:all / coverage not executed
14	14 V&V	PARTIAL	verify:strict MEASURED; dynamic V&V NOT_RUN
15	15 Reproducibility	PARTIAL	L0 builtins policy + no lockfile; clean-clone of core is plausible, not replayed
16	16 Git health	STRONG	75 commits, 1 tag, clean start, remote origin present
17	17 Code health	PARTIAL	src 22 files / 6323 lines; scripts 3.4x larger; lint/typecheck NOT_RUN
18	18 Dependency health	STRONG	No npm dependencies in package.json; node_modules absent
19	19 Agents	REPORTED	16 docs agents + 7 mission-control agents; no live process observed
20	20 Knowledge plane	REPORTED	docs/knowledge and intelligence JSON exist; not executed
21	21 Ops maturity	PARTIAL	Mission-control JSON present; telemetry hash not reproduced
22	22 Performance	NOT_RUN	No runtime/perf measurements this audit
23	23 Complexity	MEASURED	LOC and import-edge counts only; no cyclomatic tool run
24	24 Fitness functions	REPORTED	verify-eos is a fitness-like gate for files/JSON, not product fitness
25	25 Projects	PARTIAL	6 registry projects; Fundacion/ empty; Windows paths invalid here
26	26 History	MEASURED	11-day burst 2026-08-10..21; 75 commits
27	27 Risk management	PARTIAL	Registers exist; several are stale or self-certifying
28	28 Production readiness	NOT_READY	PRODUCTION_READY=NO consistently reported; this audit agrees
29	29 Epistemic honesty	PARTIAL	Constitution requires labels; live files still publish stale pass-counts

X. All P0–P3 risks

ID	Sev	Title	Class
R-P0-01	P0	Stale/contradictory system-health pass counts used as live telemetry	CONTRADICTED
R-P0-02	P0	Security remediations cite modules that do not exist	CONTRADICTED
R-P0-03	P0	npm test not executed; mutation risk in suite	NOT_RUN
R-P1-01	P1	Dual kernel copies (src/core vs scripts/engine)	OBSERVED
R-P1-02	P1	MCP CONNECTED claims vs this environment	CONTRADICTED
R-P1-03	P1	Freeze documents pin stale main SHA	CONTRADICTED
R-P1-04	P1	PRJ-FUNDACION empty; GAP-002 still UNKNOWN	OBSERVED
R-P1-05	P1	CLI constructor creates .missions as side effect	OBSERVED
R-P2-01	P2	Registry paths are Windows absolute and invalid on this VM	OBSERVED
R-P2-02	P2	Budget/usage telemetry not reproduced	REPORTED
R-P2-03	P2	RISK.json freezes scripts/engine/core which does not exist	CONTRADICTED
R-P2-04	P2	Historical PRODUCTION_READY verdicts inside EVD-0033/34/35	REPORTED
R-P2-05	P2	Heuristic secret-like assignments in tests/engines	OBSERVED
R-P3-01	P3	Docs dominate inventory (651/1046 files)	MEASURED
R-P3-02	P3	No lockfile under L0 policy	OBSERVED
R-P3-03	P3	sqlite artifacts in EOS-Lab	OBSERVED

Y. Findings and recommendations (full)

Findings

ID	Pol	Title	Class
F01	POS	verify:strict executed 471/471 PASS exit 0 in 32 ms	MEASURED
F02	POS	Mission OS kernel modules exist under src/core (22 JS files, 6323 lines)	MEASURED
F03	POS	package.json has zero npm dependencies; L0 builtins policy matches observation	OBSERVED
F04	POS	PRODUCTION_READY=NO is consistent across CURRENT_MISSION and freeze docs	REPORTED
F05	POS	GAP-002 remains labeled UNKNOWN in mission-control and unknown register	REPORTED
F06	POS	Git history is short, linear, tagged RC; start working tree was clean	MEASURED
F07	POS	MCP tool table in src is enumerable (20 tools) with deny-by-default comments	OBSERVED
F08	POS	HITL human-only action set is explicit in source	OBSERVED
F09	NEG	System health numbers contradict each other (20 / 471 / 472 / 608 / 663 / static 777)	CONTRADICTED
F10	NEG	726/726 and 615/615 previous-memory claims are not in this tree	CONTRADICTED
F11	NEG	Security matrix remediates nonexistent src/core modules	CONTRADICTED
F12	NEG	Freeze status pins main=78b28d6; actual HEAD=24b6968	CONTRADICTED
F13	NEG	ACTIVE_TOOLS.json reports MCP CONNECTED; not observed on this VM	CONTRADICTED
F14	NEG	Dual FSM/HITL/evidence engines (src vs scripts)	OBSERVED
F15	NEG	Fundacion/ is empty; registry points at Windows path	OBSERVED
F16	NEG	RISK.json freezes scripts/engine/core which does not exist	CONTRADICTED
F17	UNKNOWN	npm test / coverage / CLI runtime / MCP studio smoke not run this audit	NOT_RUN
F18	UNKNOWN	Whether 20/20 freeze tests still pass on 24b6968 is unknown	NOT_RUN
F19	UNKNOWN	BUDGET.json usage figures have no measurement chain here	REPORTED
F20	CONTRADICTED	Documented CORE freeze locations do not match a single existing kernel directory	CONTRADICTED

Recommendations

ID	Finding	Recommendation
REC01	F09	Remove or timestamp-lock all live test-health strings; single measured source or NONE
REC02	F10	Never restore 726/726 or 615/615 without a new MEASURED run
REC03	F11	Quarantine EOS_STEP_9_SECURITY_MATRIX.json as HISTORICAL / NOT_APPLICABLE_TO_CURRENT_TREE
REC04	F12	Rewrite freeze gate docs to current HEAD or mark SUPERSEDED
REC05	F03	Keep L0 no-dep policy until a lockfile gate exists
REC06	F17	Create a declared non-mutating test subset (tmp workdir only) and run it under evidence
REC07	F18	Re-run the freeze 4-file suite in an isolated tmp dir; record exit and SHA
REC08	F14	Declare one authoritative kernel path; mark the other DEPRECATED in code not just docs
REC09	F13	Change ACTIVE_TOOLS MCP status from CONNECTED to CONFIGURED or UNKNOWN until a live handshake
REC10	F15	Keep Fundacion empty until GAP-002 official source; do not infer legal data
REC11	F16	Point CORE-freeze monitors at src/core (or the real path), not scripts/engine/core
REC12	F05	Leave GAP-002 UNKNOWN; do not close from web inference
REC13	F19	Treat BUDGET.json current_usage as demo/stale until a ledger backs it
REC14	R-P1-05	Stop mkdir in MissionRuntime constructor; create on first write
REC15	F20	Publish a one-page ACTUAL architecture that names src/core as Mission OS and scripts/engine as legacy/lab
REC16	F01	Keep verify:strict but label it FILE_JSON_GATE not test health
REC17	F07	Do not claim eos.provider.* operational; mcp-status already lists them not_configured
REC18	F04	Retain PRODUCTION_READY=NO until measured runtime + security + tests exist
REC19	R-P2-05	Human-review the 10 heuristic secret-hit files
REC20	F06	Pin this audit SHA in any future health dashboard

Z. Capability matrix (full)

ID	Name	Status	Operational	Evidence
CAP-CLI-MISSION	Mission CLI (bin/eos.js → MissionCLI)	OBSERVED	UNKNOWN	src/cli/mission-cli.js, bin/eos.js

-----------------	---	-----------	---------	--

AA. Unknowns the board must keep unknown

- GAP-002 legal/banking facts until official PO source.
- npm test result on this HEAD.
- Freeze 20/20 on SHA 24b6968.
- Coverage.
- Live MCP connectivity.
- Runtime performance (except verify-eos 32 ms).
- Whether ATS is the sole writer at runtime.
- Why verify drifted 472 → 471.

AB. Command ledger (what was and was not run)

Command (abbrev)	Exit	ms	Class
env + git metadata	0	676	MEASURED
branch + mkdir report dirs	0	80	MEASURED (allowed mutation)
inventory collector	0	138	MEASURED
existence listing	0	72	MEASURED
verify-eos --strict --json	0	32	MEASURED
verify-eos --strict	0	29	MEASURED
more collectors + kernel import	0	199	MEASURED
product baseline walk	0	80	MEASURED
npm test / CLI help / MCP start	—	—	NOT_RUN

AC. How the board should talk about EOS after this audit

Allowed: “We have a local Mission OS codebase, a passing file/JSON gate (471/471), zero npm dependencies, and an honest PRODUCTION_READY=NO.”

Forbidden: “615/615 tests,” “726/726 tests,” “472/472 current,” “663/663 live,” “608/608,” “production ready,” “MCPs connected,” “CORE frozen meaning src cannot change,” “Fundación is an operating site,” “security 16/16 on current kernel.”

Next measurement that would change the verdict toward C (not A): isolated freeze-suite replay on 24b6968 with sealed logs, plus a non-mutating MissionRuntime inspect in tmp. That still would not make production ready.

AD. Inventory detail (for the packet appendix)

Class	Files	Bytes
docs	651	1930920
tests	163	527460
scripts	107	613812
eos-lab	64	625146
src	22	243380
agents-dot	10	13862
mission-control	9	7661
root-other	8	22705
luxe-registry	4	18303
multimodal	4	17015
cursor	3	3203
bin	1	557

Total 1046 files / 4,024,024 bytes excluding this report directory. MEASURED.

AE. Entrypoints and why help was not run

`bin/eos.js` constructs `MissionCLI`, which constructs `MissionRuntime`, which `mkdirSync('.missions')` if missing. The auditor treated `--help` as mutating and marked it `NOT_RUN`. Help text was read from source instead (`OBSERVED`).

Legacy `npm run eos` is a different program (`scripts/cli/eos.js`) and embeds a fallback health string `608 / 608 PASS`.

AF. MCP tools declared (20)

Tool	Effects	Auth
<code>eos.mission.resolve</code>	NONE	A0
<code>eos.mission.start</code>	LEDGER_WRITE	A1
<code>eos.mission.status</code>	READ_ONLY	A0
<code>eos.mission.recover</code>	LEDGER_WRITE	A1
<code>eos.context.compile</code>	READ_ONLY	A0
<code>eos.ledger.get_features</code>	READ_ONLY	A0
<code>eos.ledger.update_feature</code>	LEDGER_WRITE	A1
<code>eos.authority.check</code>	READ_ONLY	A0
<code>eos.policy.validate</code>	READ_ONLY	A0
<code>eos.evidence.record</code>	LEDGER_WRITE	A1
<code>eos.evidence.get</code>	READ_ONLY	A0
<code>eos.verifier.run</code>	READ_ONLY	A0
<code>eos.provider.route</code>	READ_ONLY	A0
<code>eos.provider.health</code>	READ_ONLY	A0
<code>eos.workspace.discover</code>	READ_ONLY	A0
<code>eos.workspace.barrier_check</code>	READ_ONLY	A0
<code>eos.fdir.status</code>	READ_ONLY	A0
<code>eos.fdir.trip</code>	NONE	A2
<code>eos.audit.run</code>	READ_ONLY	A0
<code>eos.report.generate</code>	READ_ONLY	A0

`eos.provider.route` and `eos.provider.health` are declared in source and marked `not_configured` in `mcp-status.json`.

AG. FSM states (17) and transitions (16)

VISION_INTAKE, MISSION_FORMULATION, HUMAN_DIRECTION_GATE, DISCOVER, DEFINE, PLAN, DELEGATE, SUPERVISE, VERIFY, REVIEW, HUMAN_RELEASE_GATE, OPERATE_AND_LEARN, PAUSED, BLOCKED, FAILED, CANCELLED, COMPLETED

Canonical transition count: 16. Imported from `src/core/sdd/sdd-fsm-engine.js`. Duplicate file exists under `scripts/engine/`.

AH. Evidence store vs this audit

84 JSON files sit in docs/evidence/. They are a store, not this audit's certification. This audit's evidence is only docs/reports/eos/master/raw/ plus the executed verify-eos logs.

AI. Print checklist

Print EOS_MASTER_EXECUTIVE_ATLAS.html (this document) for the board. Keep EOS_MASTER_SYSTEM_REPORT.html for the technical committee. Attach EOS_MASTER_SYSTEM_METRICS.csv as the numbers sheet. Do not circulate charts without their captions.

End of expanded Executive Atlas. Same numbers as the master report. Verdict remains D.

EOS Master Executive Atlas · print-ready · Verdict D NOT_READY
